

THE CLEAN ENERGY TRANSITION

Balancing the Pace of a Clean Energy
Transition... Affordably, Reliably, and
Responsibly For All

Morgan Scott

Director - Climate READi,
Sustainability & Ecosystem
Stewardship | EPRI

CLEAN ENERGY TRANSITION = OPPORTUNITY!

2-3x

GROWTH IN
ELECTRICITY SALES

20-30%

IMPROVEMENT IN
ENERGY AFFORDABILITY

Choice

CUSTOMER
OPTIONS

DONE RIGHT...CLEAN ENERGY TRANSITION SHOULD BE AFFORDABLE TO ALL

2030 STRATEGIC IMPERATIVES

NEW THINKING, NEW APPROACHES

Accelerate
Energy Supply
Innovation

Advance Load

MANAGING INTERMITTENCY

Emerging Low-Carbon Dispatchable Technologies will be Required

Wind & Solar

Carbon Capture, Usage & Storage

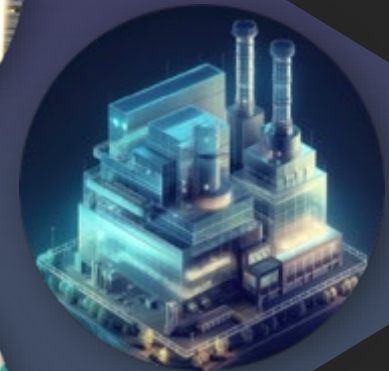

Advanced Nuclear

Hydrogen

Long Duration Battery Storage

Virtual Powerplant

PACE of CHANGE IMPACTS AFFORDABILITY, RELIABILITY and RESILIENCY

Benefits of Advanced Reactors

Advanced reactors integrate with renewable energy and improve the utilization of secure energy resources

Increased **FLEXIBILITY**

Ability to reach **UNIQUE** communities

NEW DESIGNS can load-follow closer, faster, and more flexibly

Ability to convert more **FUEL ENERGY** to usable electricity

More conducive to **DECARBONIZATION** goals

Many designs are small:
<300 MWe

FAST FORWARD TO 2030

WHAT IF...

In this future, each customer brings

2-11 kW

of controllable load.

CUSTOMER-OWNED APPLIANCES
ARRIVE GRID-CONNECTED

EV CHARGERS ARE CONTROLLABLE
FROM DAY ONE

EVERY NEW WATER HEATER AND A/C
INCENTIVIZES DEMAND-RESPONSE PROGRAM PARTICIPATION

REALIZING THIS VISION BY 2030 REQUIRES A COMPREHENSIVE STRATEGY NOW

Electric Panel Survey Project

What is the amperage of your main breaker?

n=2,950

U.S. – All Regions

100 Amps or Less

101-150 Amps

151-200 Amps

201+ Amps

I couldn't find the main breaker

I don't see a label

Midwest

South

Northeast

West

- 100 Amp or less least likely in the South, most likely in NE and MW

Possible Alternatives to Panel Upgrades

Amp Diet

Minimizing the size of the electric loads – no backup strip heat, smaller appliances, slow charging

Load Switches

Manually switch between two large electric loads (e.g., dryer and EV charger)

Smart Panels

Potentially mitigate the service upgrade with automated load balancing in the home

Code Changes

National Electric Code is a safety code first. May inadvertently hinder whole-home electrification

Heat Pump Impacts on Grid Peak Demand

- 01 Normally sized for peak cooling plus safety factor
- 02 For mixed and cold climates, compressor heating capacity often insufficient to meet peak heating loads
- 03 Inefficient electric resistance provides supplemental heating
- 04 Electric resistance strains electric grid during winter peak

Single-speed all-electric heat pumps

Variable capacity all-electric heat pumps

- 01 Can be sized to meet most or all of the peak heating load
- 02 Reduces or eliminates electric resistance auxiliary heat
- 03 Reduces strain on electric grid during peak
- 04 Variable speed allows compressor to slow down to meet peak cooling load

Opportunity

Variable capacity heat pumps can provide:

- Lower peak demand
- Lower customer bills
- Improved customer comfort
- Less utility infrastructure investment

Funding and tax credits can help adoption

A PERFECT STORM

2030

Key Takeaways

Central Role of the Electric Sector

Electrification and power sector CO₂ reductions are key strategies for reaching targets

Accelerated Electrification

Aggressive deployment is key to meeting the targets especially in transport

Reliability

Advances in operational practices and grid technologies to ensure reliability; firm capacity is key asset

Customer Impacts

Decarbonizing the economy requires redirecting customers' energy equipment choices and changes in expenditures

Regional Deep Dives

Pathways will likely vary significantly by region; more detailed studies can examine potential bottlenecks, opportunities, and impacts

Great opportunity for the energy sector & societal priorities to intersect

A blue-tinted photograph of four people standing in a row. From left to right: a woman with curly hair and glasses, a man with glasses and a white lab coat, a woman wearing a white hard hat and a dark polo shirt, and a man with glasses and a beard wearing a light-colored button-down shirt. They are all smiling and looking towards the camera.

Together...Shaping the Future of Energy™
